

SauceDemo - QA Test Plan

QA / SDET Assignment

1. Scope

The main purpose of this testing is to check the important user flows of the SauceDemo application and see if they are working as expected.

I will mainly cover:

- Login and logout
- Product listing and product details
- Product images, names and prices
- Add/remove products from cart
- Checkout flow
- Side menu and navigation
- Reset App State
- UI issues
- Different user types
- Negative and exploratory scenarios

The testing is mainly focused on the normal customer journey from login to completing an order.

2. Types of Testing

Functional Testing

Check whether login, product browsing, cart and checkout are working correctly.

UI Testing

Check buttons, icons, product cards, text, alignment and whether important elements are visible properly.

Negative Testing

Try invalid login details and incomplete checkout information and check the error messages.

Edge Cases

Check empty cart, adding/removing products more than once, refreshing pages, going back and forward, and changing application state.

Exploratory Testing

Apart from the planned test cases, explore the application and different users to find unexpected issues.

Cross Browser

Important flows can be checked on Chrome, Edge and Firefox to make sure the behavior is consistent.

Responsive Testing

Basic checks can be done at different screen sizes to identify UI or layout problems.

3. Test Environment

Item	Details
Application	SauceDemo / Swag Labs
OS	Windows
Browser	Google Chrome
Testing type	Manual + Automation
Automation	Python, Selenium WebDriver
Framework	PyTest

Note: Browser/device details should be updated if additional environments are actually tested.

4. Test Data

Username	Use
standard_user	Normal user flow
locked_out_user	Check locked user login behavior
problem_user	Check product/application issues
performance_glitch_user	Check slow/performance related behavior
Password	secret_sauce

5. Test Cases

TC-01 - Login with valid user

Purpose: Check that a normal user can login.

Steps: Open SauceDemo; enter standard_user; enter secret_sauce; click Login.

Expected: User should login successfully and Products page should open.

Priority: High

TC-02 - Login with locked out user

Purpose: Check that a locked user cannot login.

Steps: Open login page; enter locked_out_user; enter secret_sauce; click Login.

Expected: User should not be logged in and a proper error message should be shown.

Priority: High

TC-03 - Add and remove product from cart

Purpose: Check basic cart functionality.

Steps: Login with standard_user; select product; Add to Cart; open cart; verify product; Remove.

Expected: Product should be added and should be removed when Remove is clicked.

Priority: High

TC-04 - Complete checkout

Purpose: Check whether a user can complete an order.

Steps: Login; add product; open cart; Checkout; enter first name, last name and postal code; Continue; check overview; Finish.

Expected: Order should be completed and confirmation should be displayed.

Priority: High

TC-05 - Checkout with missing information

Purpose: Check validation when required checkout information is not entered.

Steps: Login; add product; go to Checkout; leave one required field empty; click Continue.

Expected: User should not be able to continue and a clear validation message should be shown.

Priority: High

6. Risk Assessment

Area	What can go wrong	Impact
Login	Login or error handling may not work correctly	User may not be able to access the application
Product price	Price may be incorrect or change unexpectedly	Can affect customer purchase decision
Product details	Image/name/details may not match	User can get incorrect product information
Cart	Product may not be added or removed correctly	Can cause incorrect order
Checkout	Validation or order completion may fail	User may not be able to complete purchase
Navigation	User may be taken to an unexpected page	Can confuse the user
UI	Buttons/icons/elements may not be aligned	Affects usability and appearance
Different users	Some user types may behave differently	Can create inconsistent experience

7. Exit Criteria

- Main login, product, cart and checkout flows are tested.
- Important bugs are reported with proper steps and evidence.
- Critical and high priority issues are identified.
- Required automation tests are executed.
- Test plan, bug report and test evidence are ready for submission.
